

Daewoo Fuel Pump Modules

The Problem

Several OE Daewoo fuel pump modules feature an external strainer/filter element. An Airtex design change to this element results in a fuel pump that looks different from the original fuel pump.

The Solution

The Airtex pump features a strainer/filtration housed inside the reservoir unit designed to provide better trapping of fuel system contaminants. The difference in appearance is related to the enhanced filtration and improving performance while retaining the precise fit required in today's applications.

OEM Fuel Pump

Airtex Improved Fuel Pump

This fuel pump design uses a filter/strainer that is housed inside the reservoir unit.
